Model Overview

Introduction

A range of compact water dispensers, available in the following operational types:

- Direct Chill Chilled & Ambient (Low Pressure Tank System)
- Direct Chill Chilled, Ambient & Hot (Low Pressure Tank System)
- Direct Chill Chilled & Ambient
- Direct Chill Chilled, Ambient & Hot
- Direct Chill Chilled, Ambient & Sparkling
- Direct Chill Chilled, Hot & Sparkling

The B4 model is available as a countertop with a matching base cabinet in three colours.

All Models

All models are self-contained machines with robust steel framed cabinets and attractively injection moulded plastic front, side and top panels. An IEC Power Lead is supplied for connection to the IEC socket located at the rear of all models (An additional Schuko type is supplied for the European market).

Chilled

Water is fed into the insulated cold tank under mains pressure. We strongly recommend a Pressure Reducing Valve is fitted to all supplies to regulate the pressure to 3.5 bar/355 KPat. The cold tank is chilled via the evaporation coil of the capillary controlled refrigeration compression system. The cold temperature is thermostatically controlled via the adjustment screw on the cold thermostat. This is factory set and it is not necessary to adjust in most cases (see Controls).

Ambient

Water bypasses the cold tank for the ambient dispense.

Sparkling

Water is chilled as it passes through the Direct Chill coil. It is pumped under pressure into the carbonator which is fitted within the Direct Chill coil. The carbonator is also level controlled. The Deep Sparkle effect occurs through saturation with CO₂.

All models also incorporate a leak detection device within the unit which disables the dispense function until rectified.

Hot

Hot water is provided by a hot water tank with an integrated heater element. The water is supplied directly into the tank under the pressure as connected into the back of the unit. The water fills the tank and hot water is dispensed by displacement. The water flow is controlled by a solenoid.

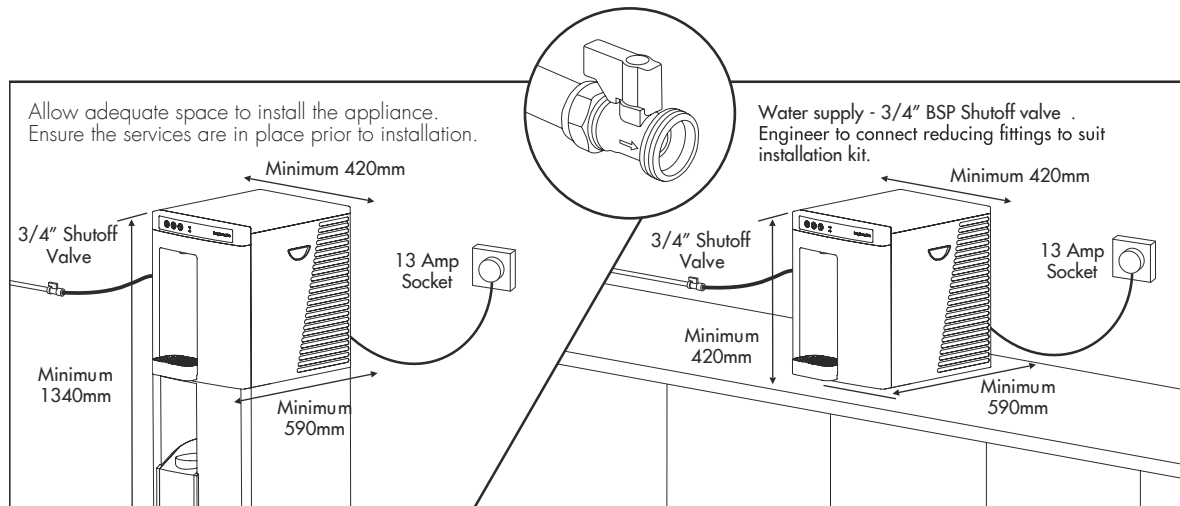

Direct Chill

Borg & Overström Direct Chill utilises innovative technology to chill water instantly. We recommend this system for more demanding environments because of its optimum dispense performance and unrivalled hygienic qualities. Superior to the gravity fed Reservoir system, Direct Chill technology chills water on demand for the ultimate drinking experience.

Before installation

Controls

Chilled

Chilled On/Off Switch: at upper rear of machine, switches cooling operation on/off.*

Cold Thermostat: at rear of machine.

Chilled Button: Press to dispense cold water.

Chilled LED: Indicates chilling application is switched on.

10A Fuse: On rear of machine, integral with IEC socket.

*All Direct Chill variants incorporate an auto-fill system

Ambient

Ambient Button: Press to dispense ambient water.

Sparkling

Carbonation On/Off switch: Switches sparkling operation on/off.

Sparkling Button: Press to dispense sparkling water.

Sparkling LED: Indicates sparkling application is switched on.

Hot

Hot On/Off Switch: The hot water heating mode is controlled by a switch on the back of the unit, next to the cooling mode switch.

Hot Thermostat: regulated by a pre-set, non-adjustable sensor on the tank.

Hot Button (incorporates safety lock): Press once to unlock. Press again to dispense hot water. (Note: Machine will revert to locked after 5 seconds if dispense is not activated.)

Hot LED: Indicates hot application is switched on.

Floor standing Version

All models are designed to fit straight onto the top of the base cabinet to create a floorstanding model.

Ensure the feet are in the nesting positions.

The Door Panel is hinged and fastened with Magnetic Catches. The cabinet can be levelled using the adjustable feet. Service entry is at the back of the machine.

Every Base Cabinet is supplied with a Level Sensor Kit, comprising of:

- A water container.
- Sensor unit (c/w 2 no. CR3032 batteries). (Requires some assembly – see page 7.
- Drip Tray with Drainage Outlet.
- Interconnection kit between unit and cabinet – see page 24.

Installation

Major Components

Water & CO2 Connection

Level Sensor Assembly

Check all parts are present.

Unscrew lid.

Fit both batteries and refit lid.

Exchange the drip tray.

Connect the drainage tubing that is pre-fitted down the front left hand side of the cabinet.

Level sensor positioned in container.

NOTE: A WARNING TONE WILL SOUND WHEN THE WATER RISES (3 BEEPS EVERY 1.5 SECONDS REPEATED). UPON EMPTYING THE CONTAINER THE WARNING TONE WILL STOP. CONTINUAL BEEP INDICATES LOW BATTERY POWER.

Operation

Water Connection & Operation

1
Connect and turn on the water supply. Then connect the power supply.

2
To avoid damage **do not turn on** the cold or hot power switches until water flows out of the machine. (If applicable)

3
Press and hold the cold water button until water comes out.

4
All hot & sparkling tanks must be purged of air by holding the corresponding button. Do not switch the hot system on until tank has been purged.

5
On sparkling models turn on the carbonation switch on the back of the unit.

6
The relevant indicator lights will be lit.

Water Connection & Operation (Continued)

Flush through 10 litres of water before use.

When the cold water switch is turned on, the cold water indicator will be lit.

The temperature of cold water can be set from 4c to 11c. Allow up to 1 hour for the water to reach its minimum temperature.

CO2 Bottle Installation (Sparkling Versions Only)

IMPORTANT! ALWAYS ENSURE SECURITY CLIPS ARE USED ON ALL WATER AND CO2 CONNECTIONS.

1 Attach the regulator to the disposable CO2 bottle, ensuring the regulator is closed.

2 Connect the assembled CO2 bottle and regulator to the machine using 1/4 inch pipe.

3 After completing the water installation, turn on the sparkling power switch and the pump will run. Do not open the regulator valve until the carbonated switch has been turned on.

4 We recommend between 3.5 - 4 bar. Do not exceed 4 bar pressure.

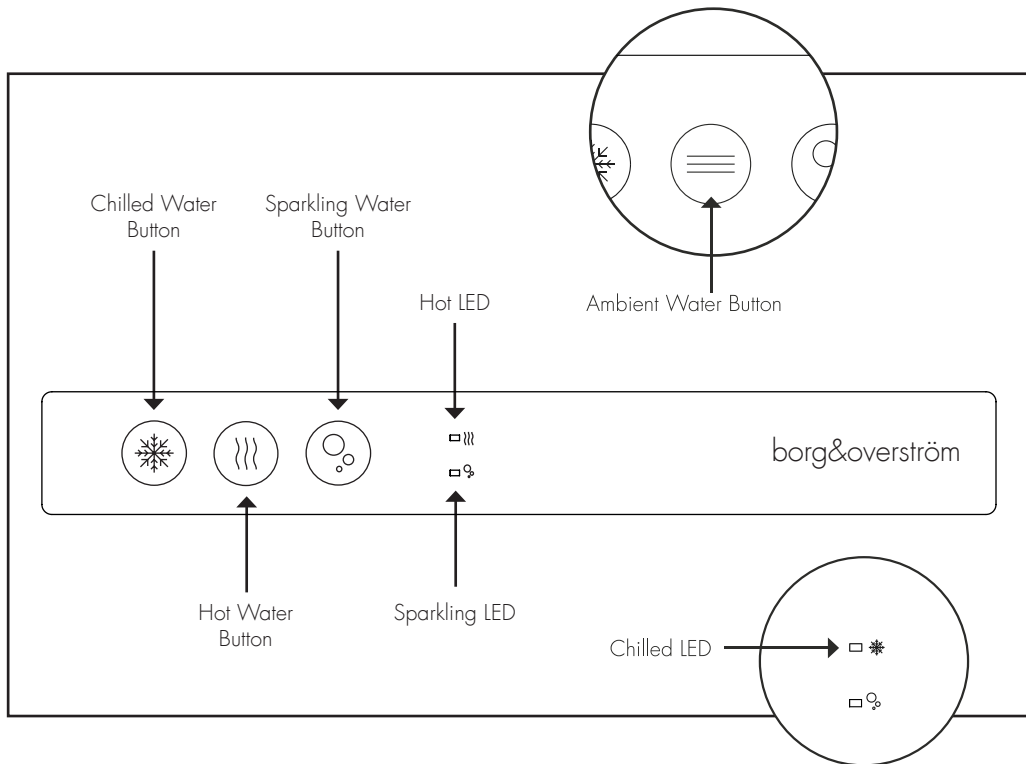

5 Flush through approximately 10 litres of sparkling water. Check and adjust the CO2 pressure accordingly.

6 Following installation, it will be necessary to leave the machine for up to 1 hour for the initial chilling cycle to occur.

Functions & Controls

General Safety

Maintenance

Isolation & Removal

Please make sure the machine is completely disconnected from the electrical supply before carrying out any maintenance work.

Turn off the water supply.

To drain the Direct Chill tank, remove the caps on the back of the machine. We recommend they are refitted immediately upon draining being completed.

Sanitisation Guide

NOTE: Before beginning the sanitation process please ensure that water is turned off at the mains and refer to the sanitisation liquid MSDS documentation for further information. Use bioguard hand gel and ensure gloves are worn.

Briefly press cold/ambient dispense buttons to release internal water pressure from the machine.

Remove the existing cartridge.

Add 25 ml of Bioguard Internal Sanitisation fluid to a clean and empty service filter cartridge.

Connect the service cartridge to machine.

Turn on incoming water, allow service cartridge/doser to fill.

Dispense water using the cold button until the water appears pink. Repeat with sparkling button if present. Briefly press the ambient button too.

Leave the solution inside machine for sanitisation (minimum 5 minutes) while thoroughly cleaning the machine externally, pay particular attention to the dispense faucet and buttons.

If a Waste Overflow System is fitted, empty this and flush through with a small amount of sanitisation fluid if needed. Remember to include the drip tray and connecting pipe work.

When the external cleaning (after a minimum of 5 minutes) is completed, flush the machine using the cold, sparkling and ambient button with clean water until the dispense water runs clear.

Turn off water and remove the service filter. Retain service filter for reuse.

Fit new filter. Turn on incoming water supply.

Pre-flush the new filter to waste using the ambient button (and sparkling button if present) until the water appears clear and is free of air. Flush through a small amount of water to check all functions.

Please note that this sanitisation fluid contains an active caustic/alkaline agent. Always use responsibly and with care remembering that due to its alkaline nature unnecessary concentrated/prolonged contact with any materials, including metals, can cause damage. Always rinse all contact surfaces after use with clean water.

Avoid skin contact and wear protective gloves when handling sanitisation fluids

In the event of any skin contact, flush immediately with clean, cold water

Leak Detection (power cut off) - All Variants Enhanced Leak Detection (Flood prevention) Available as Optional Extra.

NOTE: If this machine is equipped with a leak detection device. When leaking is detected the dispense operation will be cut off automatically.

To reset:

Unplug the machine.

Locate the source of leakage and rectify.

Locate the detection probe which can be found in the bottom rear left hand corner. Dry the probes and internal area with a dry cloth.

If enhanced Leak Detector is fitted as optional extra: locate the Leak Detector valve.

Reset the red lever (push it in).

Reconnect the power to machine and test operation.

If leak detector is fitted as optional extra, reset the red lever (push it in)

Emptying the Carbonation Tank for Transportation

Switch off the Carbonation System switch on the back of the unit.

Press and hold the Sparkling water dispense button until all water is expelled.

The tank is empty of sparkling water when only CO2 is being released.

Ensure to release the Sparkling water button and take care to avoid releasing excess amounts of CO2 gas.

Advanced Troubleshooting

Fault Diagnosis: No Water Dispenses

Problem/Report	Possible Cause	Suggested Action
From Ambient Dispense	Water Supply turned off	Check all that taps/valves/ filters on the incoming supply are fitted and are turned on.
	"Waterblock" tripped off (and tank empty).	Reset "Waterblock" (and check for any leaks).
	"Leak detector" (if fitted) tripped off (and tank empty).	Disconnect the power and water supply, reset the machine (check for leaks).
	Solenoid not working	Dismantle and check the solenoid, completely replacing the solenoid as necessary.
	No Electricity/Power Supply.	Check power cord is connected and live. Check machine is switched on.
	Blocked tank outlets/pipes.	Check and unblock or replace as needed.
	Control PCB not working	Check/replace Control PCB
From Cold Dispense	Firstly all as for Ambient Dispense.	Carry out checks and actions as for ambient dispense.
	Chiller tank frozen – Thermostat set too low.	Thaw out the machine and increase cold water temperature.
	Chiller tank Frozen - Thermostat not working.	Thaw out the machine and check thermostat. Replace Cold Water thermostat as needed.
	Chiller tank frozen.	Circulation pump not working / Thaw out the machine and check circulation pump. Replace circulation pump as needed.

Problem/Report	Possible Cause	Suggested Action
From Hot Dispense	Firstly all as for Ambient Dispense.	Carry out checks and actions as for ambient dispense.
	Airlock in dispense pipe work.	Unblock/replace hot water pipe and hot vent pipe.
	Tank filled with limescale.	Replace tank.
From Sparkling Valve	Firstly as for ambient and cold valve.	Carry out the checks and actions as for cold and ambient.
	low or no CO2.	Check and replace cylinder as necessary.
	Pump not operating.	Check carbonator level control system.
		Check probes connected/Leads attached. Check power supply to pump.
	Carbonator Tank over pressurised with CO2.	<ol style="list-style-type: none"> 1. Switch the Sparkling System off. 2. Shut off CO2 supply. 3. Press the Sparkling Water button to release CO2 from carbonator. 4. Switch the Sparkling system on. 5. Check pump operation is running normally. 6. Wait for the pump to stop running. 7. Re-open CO2 supply.
	Pump Feed Solenoid Valve.	Check function/condition and repair/replace accordingly.
Carbonation System switched off.	Switch on (Switch on back of the machine).	

Fault Diagnosis: Water Dispenses but not Correct Temperature

Problem/Report	Possible Cause	Suggested Action
Ambient Water too Warm	Low usage and/or heat from compressor influencing stored water.	Check tank insulation and/or advise customer.
	High usage and/or water supply pipe in warm ducting.	Advise customer.
Cold Water not Cold	Cooling switched off.	Check switch positions as necessary.
	Compressor runs and switching off (cool/warm to touch) - Thermostat set too high.	Decrease cold thermostat set point.
	Thermostat not working.	Check/replace thermostat.
	Compressor runs but not switching off (hot to touch).	Please contact technical support.
	Refrigeration problem.	Please contact technical support.
	Compressor not running at all - No electricity power supply.	Check the Power cord is connected and live, and the machine is switched on.
	Compressor only hums slightly/briefly.	Check and replace relays.
	Relays loose.	Check and refit relays.
	Compressor not working.	Please contact technical support.
	Fan not working	Check and replace, as required.
Hot Water not Hot	Hot water mode switched off.	Switch on hot water mode (status LED should show).
	Heating operation tripped off.	Reset overheat button on hot tank.
	Break in supply wiring to control circuit.	Locate break and repair.
	Hot water demand too high.	Advise user/s.
	Heating element not working.	Check and replace Hot tank as required.
	Hot tank heavily scaled (signs of scale in top of tank, loud boiling noises etc).	Carry out thorough descale or replace hot tank.
	Break in supply wiring to main element.	Locate break and repair.

Fault Diagnosis: Water Leaks

Problem/Report	Possible Cause	Suggested Action
Water lying on top edge of lower door panel and/or bottom of Cabinet.	Overflowing Drip Tray waste container.	Empty Waste Container and check drainpipe is not blocked.
Water lying in bottom of machine.	Level Sensors not working.	Check operation/repair/replace as required.
	Leak in supply inlet pipe work and/or filter.	Locate and repair accordingly.
	Leak from machine water pipe work fittings.	Locate and repair accordingly. Check pressure and fit pressure reducing valve if needed.

Fault Diagnosis: Miscellaneous

Problem/Report	Possible Cause	Suggested Action
Repeating beeping noise	Level Sensor fitted and tank full.	Empty Level Sensor tank.
No LED Control Lights	No electricity to Machine.	Check power supply and reconnect as necessary (Also check out other symptoms as described separately).
	Check Fuse in IEC Socket.	Replace if necessary.
	Control PCB not working (Machine working normally otherwise).	Check/replace PCB.
Machine Shakes on Start-up	Compressor Starting.	No action needed. This is quite normal.
	Level Surface.	
	Uneven Surface.	Level up machine using adjustable feet.
	Missing Fixings.	Replace missing fixings.
Tripping out Electricity Supply	Machine in high humidity environment.	Discuss possible repositioning with customer.
	Electrical circuitry faults.	Test, identify and address accordingly. See Electrical Diagrams.
		Please contact technical support

Fault Diagnosis: Miscellaneous

Problem/Report	Possible Cause	Suggested Action
Slow but Continuous Water Dispense from Ambient or Cold Tap	Low incoming water pressure	Consider replumbing to alternative supply if possible
		Fit Booster pump set.
Intermittent Water Dispense from Ambient or Cold Water Valve	Trapped air in pipework (especially where water pressure is low after filter change).	Hold button on to purge air out (This could take several minutes where pressure is low).
		Pre-flush filters
	Button not being pressed enough	Press button firmly. Could be caused by surrounding cold environment making the button stiffer.
	Faulty PCB	Replace PCB
Intermittent Water Dispense from Ambient or Cold Water Valve and hammering noise.	Fluctuating mains water pressure situation.	Please contact technical support.
Continuous Water Dispense from Ambient/Cold or Hot water valve.	Button jammed on/faulty.	Replace PCB or/button panel as needed.
	Debris blocking hole in diaphragm window.	Dismantle valve and clean out.

Specification

COOLING SYSTEM	All Models	High efficiency compression system with capillary control. Premium quality long life hermetic compressor. Compact internal condenser – fan assisted for greater efficiency. Environmentally friendly R134A refrigerant.
	Chilled & Ambient	High volume 3.5 litre stainless steel pressurised cold tank for optimum water capacity on demand and hygiene. Low sanitisation and maintenance. Insulated tank for energy conservation. Large volume output performance via high pressure valves. Thermostatically controlled chilled water temperature (range down to 1°C minimum).
	Chilled, Ambient & Sparkling	3.5 litre stainless steel chiller tank with level control containing stainless steel cold water direct chill coil. Stainless steel carbonator tank with independent level control fitted inside coil. High capacity, low voltage diaphragm inlet pump.
HEATING SYSTEM	Chilled, Ambient & Hot	High volume 3.5 litre stainless steel pressurised cold tank for optimum water capacity on demand and hygiene with low sanitisation and maintenance requirement. Thermostatically controlled chilled water temperature (range down to 1°C minimum). 1.75lt stainless steel hot water tank with thermostatic temperature control (92C max). Insulated tanks for energy conservation. Large volume output performance via high pressure solenoid valves.
	Chilled, Hot & Sparkling	3.5 litre stainless steel chiller tank with level control containing stainless steel cold water direct chill coil. Thermostatically controlled chilled water temperature (range down to 1°C minimum). Stainless steel carbonator tank with independent level control fitted inside coil and high capacity, low voltage diaphragm inlet pump. 1.75lt stainless steel hot water tank with thermostatic temperature control (92C max). Insulated tanks for energy conservation. Large volume output performance via high pressure solenoid valves.
COLD TEMPRATURE		2°C to 11°C
HOT TEMPRATURE		92°C Max
THROUGHPUT PER HOUR		18 litres cold < 12°C / 16 litres sparkling < 12°C
DISPENSE		Ergonomically designed and situated light touch sensitive controls.
MAXIMUM RUNNING POWER CONSUMPTION	Chilled & Ambient	100 watt
	Chilled & Hot	600 watt
	Chilled & Sparkling	140 watt
	Chilled, Hot & Sparkling	640 watt
POWER SUPPLY		IEC power socket.
WATER CONNECTION		1/4 inch quick connection.
CO2 CONNECTION		1/4 inch quick connection.
COUNTERTOP DIMENSIONS		(w x d x h) 320 x 440 x 415mm
(INCLUDING BASE CABINET)		(w x d x h) 1325 x 440 x 415mm
WEIGHTS	Chilled & Ambient	14.5kg
	Chilled & Hot	16.2kg
	Chilled & Sparkling	21.0kg
	Chilled, Hot & Sparkling	22.9kg
